ENDOSCOPIC PROCEDURE REPORT

Procedure : ENDOSCOPY UPPER G.I.T.

Indication : N/A

Medication : N/A

FINDINGS :

• **Oesophagus:-**
Early varices seen.

• **Stomach:-**
The mucosa of the fundus and body is oedematous and reticulated.
Rest of the stomach is normal.

• **Duodenum:-**
The bulb, post-bulbar area and second part appear normal.

• **Biopsy:-** Not taken.

COMMENTS :
EARLY OESOPHAGEAL VARICES
WITH PORTAL HYPERTENSIVE GASTROPATHY.

MOLECULAR BIOLOGY

INVESTIGATION

RESULT

HCV RNA Viral Load (Quantitative) PCR, WB-EDTA PLASMA

Hepatitis C Virus RNA Quantitative PCR

Method : Real Time PCR

410213

Result (IU/mL)	Comments
<11.1	The results Below 11.1 IU/mL do not indicate that the patient is negative for HCV. This assay cannot accurately quantify HCV RNA below this level" indicates that the HCV RNA level is below the lower limit of quantification for this assay. When clinically indicated, follow-up testing with this assay is recommended in 1 to 2 months
>11.1 - 10000000	HCV RNA Detected within the linear range of the assay. A quantitative result expressed in IU/mL indicates the degree of active HCV viral replication in the patient. Monitoring HCV RNA levels over time is important for assessing disease progression or monitoring a patient's response to anti-HCV therapy.
>10000000	HCV RNA Detected above the linear range of the assay. A "Detected" result with the comment, " HCV RNA level is >10000000 IU/mL. This assay cannot accurately quantify HCV RNA above this level" indicates that the HCV RNA level is above the upper limit of quantification for this assay.

Clinical Utility:

NOTE : This sample is processed at HealthMap Diagnostics Pvt Ltd (Hyderabad) Lab.

TRUtest

TRUtest

TRUtest

TRUtest is a rapid, sensitive, and specific test for the detection of **TRUtest** in **TRUtest**. The test is performed by adding a small amount of **TRUtest** to a test strip, which is then inserted into a reader. The reader will display a result within a few minutes. The test is highly sensitive and specific, and is suitable for use in a variety of settings, including point-of-care testing. The test is also suitable for use in a laboratory setting, where it can be used to confirm results obtained from other tests. The test is easy to perform and does not require any special equipment or reagents. The test is also suitable for use in a variety of settings, including point-of-care testing. The test is also suitable for use in a laboratory setting, where it can be used to confirm results obtained from other tests. The test is easy to perform and does not require any special equipment or reagents.

NOTE: This sample is provided as a reference only. It is not intended for use as a diagnostic tool.

Ultrasonogram of Whole Abdomen

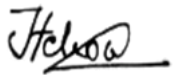

Findings:

- : No ascites or pleural effusion is seen.
- Liver : Normal in size (cm). Parenchyma is normal.
No focal lesion is seen. Portal vein measures normal.
- Gallbladder : Regular in outline. Wall thickness is within normal limits.
Multiple bright echogenic structures (10.8 mm, 9.8 mm, 9.1 mm etc) casting posterior acoustic shadows are noted within the GB lumen.
- Biliary tree : CBD and intrahepatic biliary channels are not dilated.
- Pancreas : Visible part appears normal.
- Spleen : Normal in size (10.0 cm) and echotexture.
- Kidneys : Both kidneys are normal in size, shape and position.
Cortico-medullary differentiation is maintained.
PC systems are not dilated, No calculus is seen.
- Urinary bladder : Regular in outline. Wall thickness is normal.
No intravesical lesion is seen.
- Prostate : **Mildly enlarged in size (3.0 x 5.3 x 3.5 cm, vol- 30.8 ml).**
Echotexture is uniform. Capsule appears intact.
No abdominal lymphadenopathy is seen.

Impression:

- **Cholelithiasis.**
- **Mildly enlarged prostate.**
